

Partner Newsletter

Hello,

March 2010

Congratulations to James Meyer of Maner Costerisan for winning the February Typo contest! Each month there will be one intentional typo, and those who report it will be entered into a random drawing for a \$25 gift card for Amazon*. Just reply with the typo to the Support contact at the end of this letter between now and the start of next month. There might be unintentional typos too, but since you will not know the difference, reporting those will also count!

Features of the Month

MFG PowerPack: two additions to announce this month-

- **QuickWIP:** split the difference between backflushing and full recording of WIP labor transactions by using QuickWIP. With just a single button click you can record actual start/stop time on a routing sequence, and mark the Done flag on the sequence.
- **Proposed Cost Update:** automates the first step in adjusting costs in a Standard Cost environment by automatically setting purchased item's material cost to the last purchase price/actual cost.

Stored Queries: this tool in the Consulting Toolkit allows the consultant to create a tSQL query that can be executed in a secure manner by an end-user. The user selects from a list of Queries to which they have been granted security access. If needed, they are prompted to enter parameters, which the software inserts into the query. The user cannot see or edit the query, nor can they create their own queries. Results can be displayed to the user, or sent to an email address.

Random Branch

We do a lot of custom work for our partners--you. Our developers have either been in-the-field GP consultants, or worked hands-on with GP as business users, so we understand the issue you need to solve without lots of explanation. This background experience also allows us to *design* the solution

for you, freeing you up to focus on the implementation.

Over the years we have amassed a huge catalog of customizations which touch virtually every part of GP. We are making this available to you as a resource of ideas, and possible solutions to existing problems. Over the course of this year we will be adding more material into the online catalog, which is indexed by a custom Google search engine.

Please take a look at the Development Catalog (DevCat), and check back frequently to see the new material. <http://www.willoware.com/devcat/>

* This is just for fun. There are all kinds of rules, none of which are published anywhere. We reserve the right to do anything, so don't get too picky about this. Somebody, and not our friends or family, will get an Amazon gift card each month. Actually, if you do win, it doesn't mean you are NOT our friend, just that you were picked at random.
