Hello {FIRST_NAME},

November 2008

Congratulations to Naja Barrett at Avende Solutions for winning the August Typo contest. Each month there will be one intentional typo, and those who report it will be entered into a drawing for a \$25 gift card for Amazon*. There might be unintentional typos too, but since you will not know the difference, reporting those will also count!

Feature of the Month

There is an exciting new addition to our Manufacturing PowerPack suite. The **Capable To Promise** inquiry quickly calculates the maximum quantity of a made item that can be built with the available inventory. The components are arranged in ascending order by "Max Build Qty", which is a calculation of the amount of the made item you can build with the selected component. This unique approach to a CTP inquiry provides information both on what can be built, and what the build-limiting components are.

Random Branch

Do you set up a TEST company database for your customers? How often do you refresh it with current data? Refreshing the TEST database is a somewhat tedious task, and, it can be automated with a SQL Agent Job so it runs automatically. We created instructions for you on how to do this. Download the PDF [here](#).

* This is just for fun. There are all kinds of rules, none of which are published anywhere. We reserve the right to do anything, so don't get too picky about this. Somebody, and not our friends or family, will get an Amazon gift card each month.
