

SOFTWARE FOR MANUFACTURING & DISTRIBUTION

MICROSOFT DYNAMICS GP™

BUSINESS SOFTWARE DEVELOPMENT

## consulting **TOOLKIT**

---

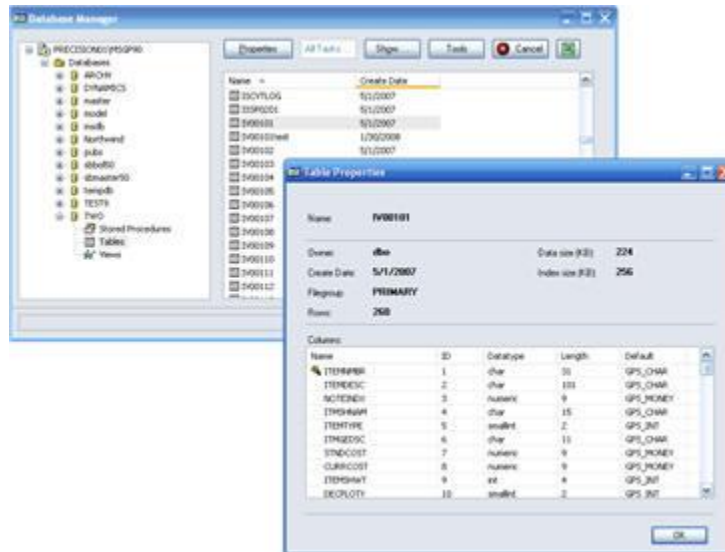

Consulting Tool Kit (CTK) is a complete set of SQL Server management tools written in Dexterity. Running inside of Dynamics GP, CTK is easy to deploy without the special security that is sometimes needed to access the SQL Server.

### **Database Manager**

Database Manager provides inquiry-only access to server, table, view, and stored procedure properties, and the ability to view data in SQL tables and views.

From Database Manager you can access:

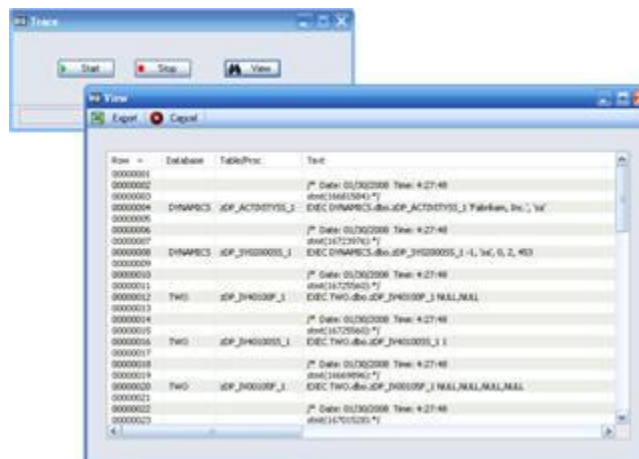

- Server Properties
- Stored Procedure Properties
- Table Properties
- View Properties
- Data in a View
- Data in a Table

Database Manager provides Inquiry-Only views of SQL Server databases, tables, and table properties.

### Trace

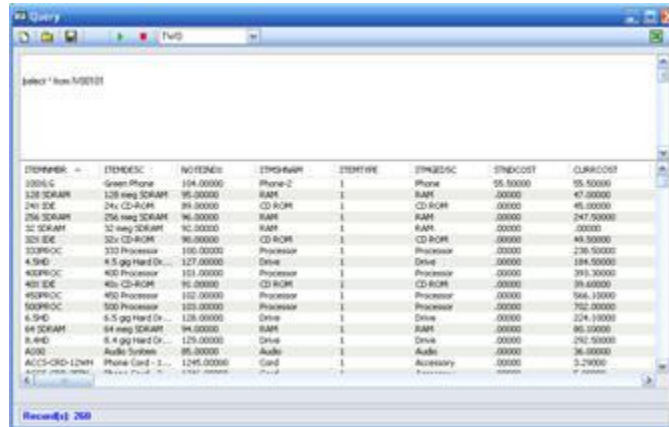

Trace allows you to track the communication between the Dynamics GP and the database. This tool is invaluable for troubleshooting, and identifying tables needed for reporting.

View all of the SQL communication between Dynamics GP and the SQL Server

## Query

Query allows you to create and run ad-hoc T-SQL queries. You can save and run stored SQL scripts, and export query results to Excel.

ITEMID	ITEMDESC	QTY	ITEMUOM	ITEMTYPE	ITEMDESC	STNDCOST	CURRCOST
2026 G	Green iPhone	104.00000	iPhone-2	I	Phone	95.50000	95.50000

Run queries from inside of Dynamics GP

## View Wizard

View Wizard is a utility for creating SQL Views of Dynamics GP tables that using "human readable" column names. For example, instead of ITMTRKOP the column name would be ItemTrackingOption. This is a great tool for building user-friendly tables for reporting, or for use in complex queries creating views for SmartList Builder.

## Stored Queries

Stored Queries provide a safe way for you to allow users to execute a pre-built SQL Query from inside Dynamics GP.
