### horizonsMIGRATION TOOL

---

Horizons Migration Tool automates the conversion from Horizons Manufacturing to Dynamics GP Manufacturing.

The Migration Tool converts the following records from Horizons to GP:

- **Bills of Material:** Since Horizons supports much larger Component Sequence Numbers than GP, the Bill of Materials migration supports several different methods of renumbering Horizons Sequence Numbers to GP Sequence Numbers. Additional options allow mapping of ECO Numbers, Item Revision Numbers, and other key Finished Good Defaults values. This process also creates Item Engineering records.
- **Routings:** Because Horizons does not require a Routing, the Migration Tool can create a "Default" blank routing in GP. The Routing Migration Wizard can move Departments, Work Centers, Cost Centers, and Operation Codes. The Mapping tool allows changing names and/or merging Departments, Work Centers, Cost Centers and Operation Codes during the migration process.
- **Site Changer:** Horizons implementations often use a number of RAW and/or WIP Locations. The Site Changer can re-map multiple Sites from Horizons to new (or combined) Sites in GP.
