mfgDATA ARCHIVE

MFG Data Archive is a utility that moves historical Dynamics GP Manufacturing data to an archival company database.

The Dynamics GP Manufacturing system generates a lot of data that over time can slow the system down. Lookups, reports, inquiries and posting can all take longer. And a very large database can become difficult to manage when backups take too long, and the size of the backups begins to push the limits of your backup medium.

MFG Data Archive integrates with the Manufacturing
Module's Remove Manufacturing Orders process.

MFG Data Archive works in conjunction with the Remove Manufacturing Orders window provided by Dynamics GP Manufacturing. As the manufacturing utility removes records, MFG Data Archive moves them to an archival company database. Archival of other Dynamics GP data can be performed with **Company Data Archive** from Professional Advantage.

MFG Data Archive also integrates with the Remove Archived BOMs window to move Archived BOMs to the archive company as they are deleted from the live database.

By moving old records to an archive, Dynamics GP performance can improve dramatically.

A proprietary backup utility included with MFG Data Archive gets you started in a snap by automatically creating an the Archive company.
